SUBJECT INDEX

A

Accipiter (hawks)
  species distribution studies, 202, 204
Acetaldehyde
  and habitat selection by *Drosophila*, 37–38
Acetic acid
  and ecobehavioral genetics of *Drosophila*, 37–38
Acidified precipitation
  effects on lacustrine ecosystems, 276–77
Adaptation
  chromosome evolution and speciation
    see Rodents
  and group selection
    see Group selection
  molecular basis of, 77–97
    adaptive significance of genetic variation, 85–91
    challenge to Darwinian view, 91–95
    Darwinian paradigm, 80–91
    evidence for de novo adaptive variation, 93–95
    historic overview, 78–80
    introduction, 77–80
    naturally occurring genetic variation, 81–85
    naturally segregating genetic variants, 92–93
    new paradigm, 95–98
  of parasites
    and evolution of disease severity, 470–78
  response to predators
    see Sex-biased pattern variation
Adaptive severity hypothesis (AS)
  in host-parasite relations, 472–73, 477–78
Africa
  southern ecosystems
    compared with Australian, 57–71
Alaska pipeline
  environmental research on, 443–59
    background, 443–45
    discussion, 457–59
    disturbance of aquatic systems, 454–57
    disturbance of terrestrial systems, 446–47
    freshwater fishes, 453–54
    freshwater lakes, 451–53
    history, 445
    mammals and birds, 450–451
    oil spill effects, 447–48, 454–57
    reforestation, 448–50
    regional description, 446
    vegetation and soils, 446–50
Alcohol dehydrogenase (ADH)
  and genetic variation in *Drosophila*, 82–84, 89
  specific activity in *Drosophila*, 36–39, 42, 44, 51
Algae
  in lakes, 271
Algal biomass
  in arctic
    effects of oil spills on, 454–55
Allochthonous organic matter
  in lacustrine ecosystems, 266, 270, 278
Allometric equations
  and ecological scaling, 214–15, 226–28
Allometry
  in ecology
    see Ecological scaling
Altruism
  and group selection, 171, 177–81, 183–84
  reciprocal
    and game theory, 395
Amphascandria
  sexual dimorphism in, 3, 5–6
Amphicarpum
  cleistogamy in, 415, 421–25
α-Amylase
  and regulatory gene variation, 84, 91
Ancestral sequence method
  in population genetics
    and parsimony origins, 316
Andropogon
  cleistogamy in, 415–16, 418–19, 421–26
Animal community comparisons
  in mediterranean ecosystems, 59, 63–65
Ants
  chemical systematics of, 289, 303–4
  mandibular glands of, 289
  in mediterranean ecosystems, 59, 64, 70
  venom alkaloids of, 289
Anurans
  sex-biased pattern variation in, 239–40, 242–44, 248
Aquatic ecosystems
  in arctic
    see Alaska pipeline
Arctic ecosystems
  environmental research
    see Alaska pipeline
Arthropods
  female-biased sex ratios in and group selection theory, 173
Asplanchna
  sexual dimorphism in, 19–24
Atavistic anomalies
  and macroevolutionary studies, 108–9
Australia
  mediterranean ecosystems
    compared with southern Africa, 57–71
Avoidance
  of noxious substances
    and ecobehavioral genetics, 42–43
  of prey
    and pattern variability, 233

B

Bacterial abundance
  seasonal patterns of
    in arctic lakes, 453
Barrens, Australia
  compared with Caledon Coast of Africa
    see Ecosystem comparisons
Batesian mimicry
  macromutation as origin, 103
  and sex-biased pattern variation, 233, 235, 238–39, 242–43
Bayesian decision theory
  and game theory in ecology, 380
Bees
  chemical systematics of, 289
Beetles
  chemical systematics of, 289
  Tribolium
    group selection experiments on, 183
Biochemical divergence

and speciation in rodents, 147–48
Biochemical diversity
in lacustrine ecosystems, 274
Biochemistry
molecular basis of adaptation, 77–97
Biogeography
of termites, 287
Biological control
of winged parasites and vectors, 480
Biomass
algal
effects of oil spills on, 454–55
in paleolimnology, 258
Bismark Islands
birds of
distribution studies, 196, 198, 207
Birds
in arctic ecosystems
and pipeline effects, 450–51
community comparisons
in mediterranean ecosystems, 59, 63–67, 69–70
ecological scaling for
see Ecological scaling
mortality in
and body size, 224–25
prey of
sex-biased pattern variation in, 231–48
Blowfly
resource utilization studies, 42
Body-length ratios
and sexual dimorphism
in cladocera, 11–12, 23, 25
in copepods, 3–5, 25
Body size
of desert rodents
and species distribution models, 198, 203
and life history
ecological scaling models, 213–28
of predators
and limiting similarity theory, 370, 372
Bombus
sex pheromones of, 289
Borrelia
and evolution of disease severity, 477
Bosmina
in arctic lakes, 452
sexual dimorphism in, 10–13, 16
Bosminidae
and competitive displacement, 273
Bothriochloa
cleistogamy in, 418–19, 422
Branchionecta
in arctic lakes, 455–56
Breeding systems
in grasses
see Cleistogamy
Bromus
cleistogamy in, 415, 418, 422
Bumblebees
labial glands of, 289
sex-biased pattern variation in, 238
Butterflies
sex-biased pattern variation in, 232, 235–38, 242–44, 246–47

C

Calanoids
sexual dimorphism in, 1–8
Caledon Coast
compared with Barrens, Australia
see Ecosystem comparisons
Camin-Sokal parsimony
definition, 316–17
Camponotus
sex pheromones of, 289
Cancers
and environmental stress, 94
Cannibalism
and group selection theory, 183
Canonical lognormal distribution
and species abundance models, 192–93
Carbon cycling
in lakes, 256, 260, 275
Cardiac glycosides
in beetles, 289
Caribou
effects of Alaska pipeline on, 450, 458
Carrying capacity
and limiting similarity, 361–62
Caryopsis size dimorphism
and cleistogamy in grasses, 417–18, 423–24
Cedar Bog Lake
and lacustrine ecosystem studies, 267, 269
Chagas' disease
and evolution of disease severity, 476
Character displacement
and competition, 205–7
in limiting similarity theory, 371
Character divergence
and game theory in ecology, 403–4
Character evolution
and parsimony, 320–29
testing of
and macroevolutionary theory, 115–17, 122–27
Chasmogamy
in grasses
see Cleistogamy
Chemical defense
in insects, 287, 292–300, 304–5
Chemical systematics
of termite secretions, 287–305
alate-calling pheromones, 302
building pheromones, 302
cuticular hydrocarbons, 303
Heterotermitinae, 290–91
introduction, 287
limits of chemical systematics, 303–5
Macrotermitinae, 294–95
methods and usefulness, 288
Nasutitermitinae, 295–99
other exocrine secretions, 300–3
other insects, 288–89
Prorhinotermitinae and Rhinotermitinae, 291–93
soldier cephalic secretions, 298–99
summary, 305
Termitinae, 293–94
trail-following pheromones, 300–2
Chicken Game
and game theory in ecology, 384–86, 388, 390
Chicks
developmental studies of
and macroevolution, 109
Chironomids
in arctic streams
and oil spills, 456–57
Chlamydomonas
in arctic lakes, 455
Chromosomal evolution
and speciation
see Rodents
Cladocera
in lakes, 271–72, 276, 279
sexual dimorphism in, 9–16
ecological effects of, 15–16
evolution of, 14–15
genetics and sex determination, 10–11
life cycle, 9–10
longevity, 13

physiology, 13
postnatal growth, 12–13
sexual intergrades and gynandromorphs, 13–14
size and structure, 11–12
Cladogenesis
and macroevolutionary theory, 105, 113–15, 125–26
Cladograms
in macroevolutionary study
criticism of, 105–6
and phylogenetic inference
issues in parsimony, 336, 340–41, 345–46, 350, 353–54
Cleistogamy
in grasses, 411–36
additional genetic aspects, 426–28
caryopsis size and sib competition, 423–24
distribution and morphology table, 431–36
geographic distribution, 414, 416
germination dimorphism in seeds, 425
introduction, 411
life history, 419–21
morphological differences between chasmogamy & cleistogamy, 417
reproductive allocation and environment, 421–23
seed dispersal and colonization, 425–26
summary and conclusions, 428–30
taxonomic distribution table, 413, 416
types of cleistogamy, 412–16
variation in reproductive structures, 416–19
Cleistogenes
in grasses, 421, 429
Climactic change
and ecosystem comparisons, 66–67
and lacustrine ecosystem history, 256–57
Clique method
of phylogenetic inference, 338
Clubionidae
female-biased polymorphisms in, 239, 246
Coevolution
and host-parasite relations, 466–68
in mediterranean ecosystem comparisons, 66
models of
and game theory, 404–5
Coexistence
of competitors
and limiting similarity, 363–66, 369, 374
Colonization
and cleistogamy in grasses, 425–26
Color patterns
in prey of birds
sex-biased variation in, 231–48
Color vision
in birds
and prey pattern variability, 233
Commensalism
and evolution of disease severity, 465, 480
Communal breeding
in mediterranean ecosystem comparisons, 66–67
Communication
intraspecific
and sex-biased pattern variation, 240–44
Community structure
and lake eutrophication, 271–74
role of competition in
and null models, 195–98, 207
Compatibility methods
of phylogenetic inference, 319, 324, 338, 343
Competition
and community structure
in lacustrine ecosystems, 273
and evolution of sexual dimorphism, 7, 14
and game theory in ecology, 395–96, 399–404
and host-parasite relations, 466
reduction of
and body size differences, 7
size and energy conversion
allometric studies, 222–23
and species abundance
quantitative models for, 191, 195–98, 202–3, 205–7
Competitive exclusion
and limiting similarity theory, 359–74
Consistency
in parsimony, 342–44, 354–55
Consumer-resource systems
models of
and limiting similarity theory, 370, 372
Cooperative behavior
evolution of
and game theory, 395
Copepoda
sexual dimorphism in, 1–9
ecological effects of, 9
evolution of, 6–9
life cycle, 1–3
Corals
biosynthetic pathways of, 288
Cost-benefit analysis
of disease severity, 467
Courtship
and sex-biased pattern variation, 240–41, 244
Crustaceans
migration and habitat selection, 41
sex-biased pattern variation in, 239, 246
Culicoides
as disease vector, 481
Cultural eutrophication
of lacustrine ecosystems, 259–62, 269, 275–79
Cyclopoids
sexual dimorphism in, 1–2, 4–6, 8

D

Daphnia
cleistogamy in, 411, 415, 421–27
Daphnia
in arctic lakes, 452, 455–56
sexual dimorphism in, 10–16
Darwinian fitness
and evolutionary game theory, 377, 379–80
Darwinian paradigm
of adaptation and natural selection
challenge to, 91–95
molecular evidence for, 80–91
Deer mouse
ecobehavioral genetic studies of, 45
Defense glands
of insects, 288–89
Defense mechanisms
in termites, 287, 292–300, 304–5
Defenses
and host-parasite relations, 469–70, 473
Developmental biology
and macroevolutionary studies, 107–10
Diagenesis

in lacustrine ecosystems, 269–71, 279
Diatoms
effects of oil spills on, 448
in lakes, 271, 275–77, 279
Diesel spills
effects on arctic ecosystems, 447–48, 456
Diffusion-reaction hypothesis
and macroevolutionary studies, 108
Dimorphism
and cleistogamy in grasses, 417–18, 423–25
in termite soldiers
and chemical systematics, 294–96
see also Sexual dimorphism
Dinobryon
in arctic lakes, 455
Disease severity
evolution of
see Host-parasite relations
Dispersal
evolution of
and group selection, 167–68
Distribution
of cleistogamy in grasses
table of, 431–36
Diversity
in paleolimnology, 258
DNA
and chromosomal evolution in rodents, 143
and molecular basis of adaptation, 83, 93–94
Dollo's law
and Dollo parsimony, 318
Dragonflies
sex-biased pattern variation in, 238
Drosophila
ecobehavioral genetic studies of, 35–52
mating in, 47–49
genetic variation and adaptation in, 79, 82–85, 88–92
hybrid dysgenesis studies of, 143–44, 150
mutations in
and macroevolution, 108, 118–19, 125
Dung flies
ecological distribution of
and game theory, 400
Dust
as ecological disturbance
in tundra ecosystems, 447
Dutch elm disease
and host-parasite relations, 480

E

Ecobehavioral genetics
habitats and colonists, 35–52
discussion, 49–51
ecobehavioral phenotype, 44–47
genetical consequences of habitat selection, 40–42
introduction, 35
mating in *Drosophila*, 47–49
resource utilization differences, 42–44
summary, 51–52
variability among species and strains, 36–40
Ecological change
effects of predators
see Sex-biased pattern variation
Ecological disturbance
of arctic ecosystems
see Alaska pipeline
Ecological effects
of sexual dimorphism
in Cladocera, 15–16
in Rotifera, 24
Ecological scaling
for mammals and birds, 213–28
allometry of *r*- and *K*-selection, 226–28
conclusion, 228
foraging time and frequency, 219–20
home range and population density, 220–22
introduction, 213–15
population dynamics and body size, 224–26
size, competition, and energy conversion, 222–23
space, 216
time scales in ecology, 216–17
turnover time of standing crop, 217–19
Ecology
application of game theory, 377–406
see also Game theory
Ecosystem comparisons
in Australia and southern Africa, 57–71
animal communities, 63–65
anomalies between, 58–59
coexistence of plants, 68–69
discussion, 65–71
historical vs environmental explanations, 66–67
introduction, 57–58
matched sites, 60
plant communities, 60–63
response to fire, 62–63, 69–70
roles of water, nutrients, and energy, 67–68
similarity of environments, 65
summary, 70–71
Electrophoretic surveys
of protein variation, 78–79, 81
Energy conversion
basal metabolic rates of
and ecological scaling, 214, 216–17, 222–23
Environmental impact
of various industries
on lacustrine ecosystems, 275–76
Environmental stress
and genetic responses, 94–95
Equilibrium condition
and evolutionarily stable strategies, 397–98
Equilibrium point
and game theory in ecology, 379, 383–84, 388
Equilibrium strategy
in game theory, 386
Erosion
control
in tundra, 449
and siltation
in lacustrine ecosystems, 262–63
Escherichia coli
evolution of metabolism, 108
induced mutations in, 94
Esterase-6
and regulatory gene variation, 84, 88
Ethanol utilization
by *Drosophila*
and ecobehavioral genetics, 36–39, 42, 44, 51
Eutrophication theory
and lacustrine ecosystems, 255, 258–60, 262, 265–67
Evolution
character change models
see Parsimony
chromosome evolution and speciation
see Rodents
of disease severity
see Host-parasite relations

as response to competition, 205–7
of sexual dimorphism
in Cladocera, 14–15
in Copepoda, 6–9
in Rotifera, 21–24
see Adaptation; Group selection; Macroevolution
Evolutionarily Stable Strategy (ESS)
and game theory in ecology, 380–81, 389–94, 397–400, 402–6
Evolutionary biology
application of game theory to, 378–79
Evolutionary game theory
Root Game paradigm, 386–405
Evolutionary stability
vs optimal resource exploitation
and game theory in ecology, 391–92
Exaptation
and functional morphology
in macroevolutionary theory, 110–11
Exocrine glands
morphology of, 287

F

Falsifiability of models
and parsimony, 336, 339–40
Feeding
and sexual dimorphism
in Copepoda, 6, 8
in Rotifera, 20–21
Fertility differentials
in hunter-gatherers, 49
Fertilization
self
see Cleistogamy
Festuca
cleistogamy in, 416, 418
Fire
burning as oil-spill cleanup method
effects on tundra, 448
role in mediterranean ecosystems, 62–63, 66, 68–71
Fishes
coral reef
and null model studies, 195
freshwater arctic, 453–54, 458
gradual evolution of, 120, 128–29
Fitness
Darwinian
and evolutionary game theory, 377, 379–80
and group selection
see Group selection
local vs global
and group selection, 171–74
Foraging
by termites
and chemical studies, 301
Foraging time
and frequency
and body size, 219–20
Foraminifera
community structure of, 272
evolutionary change in
and macroevolutionary theory, 118, 120–22, 125
Fossil record
in macroevolutionary studies, 105–7, 113–14, 116–18
Foxes
arctic
effects of Alaska pipeline on, 451
Frogs
see Anurans
Functional morphology
and macroevolution, 110–12, 126
Fungi
effects of oil spills on, 448

G

Galapagos Islands
birds of
null distribution models of, 195–96, 200, 205, 207
Game theory
applied to ecology, 377–406
classical and evolutionary game theory, 378–81
competition involving two or more species, 400–4
conclusion, 405–6
Game of Chicken, 384–86
games with many players, 395–400
introduction, 377–78
other models of coevolution, 404–5
pairwise interactions, 387–95
Prisoner's Dilemma, 381–84
and group selection, 160, 170, 179–81, 184
Gene regulation
variation in
and adaptation, 81–85, 90–91
Genetic basis
of character-state change
in macroevolution, 110
Genetic load concept
and molecular basis of adaptation, 79–80, 97
Genetics
ecobehavioral
see Ecobehavioral genetics
and sex determination
in Cladocera, 10–11
in Rotifera, 18
Genetic variation
and adaptation, 78–79
naturally occurring, 81–91
naturally segregating, 92–93
table of estimates for plants and animals, 79
and group selection theory, 168
Genome size
variation in
and evolution in rodents, 142–43
Geographic distribution
of cleistogamy in grasses, 414, 416
Geographic variation
and macroevolutionary theory, 108, 116, 118–19
Germination dimorphism
and cleistogamy in grasses, 425
Gleophyllum trabeum
interactions with termites, 300–1
β-Globin
genetic variation in coding, 83
Glucose-6-phosphate dehydrogenase (G-6-PDH)
and genetic variation studies, 89–90
α-Glycerophosphate dehydrogenase (α-GPDH)
and regulatory gene variation, 84, 88
Grasses
self-fertilization in
see Cleistogamy
Grasshoppers
sex-biased pattern variation in, 238, 244
Group selection
history and current status, 159–85
conclusions, 184–85
current status, 180–94
intrademic models, 168–70
introduction, 159–60
local vs global fitness, 171–74
mathematical tradition, 163–70

Maynard Smith's concept, 166–68
relationship with other evolutionary models, 170–80
verbal tradition, 160–63
Wright's concept, 163–65
Wynne-Edwards's concept, 165–66
Gynandromorphs
in Cladocera
and sexual dimorphism, 13–14

H

Habitat
and colonists
see Ecobehavioral genetics
heterogeneity
in species distribution models, 193–94
loss of
and arctic animals, 451
and species abundance
statistical models for, 198–99, 204–5
Habitat selection
ecobehavioral studies of *Drosophila*, 35–52
Haploidy
in male rotifers
genetic effects of, 23–24
Hawk-Dove Game
in evolutionary game theory, 386, 393
Haystack model
of group selection, 166–68, 170
Heat denaturation
in genetic variation studies, 81
Hemoglobin-*S* protein
and genetic variation studies, 87
Hermit crabs
competition in
and limiting similarity theory, 372
Heterarthrandria
sexual dimorphism in, 3, 5
Heterochromatin variation
and evolution in rodents, 141–43
Heterocope
in arctic lakes, 452, 455–56
Heterosis
negative
and chromosomal evolution in rodents, 145–46
Heterotermitinae
chemical systematics, 290–91
Home range
and body size
in birds and mammals, 216, 218–19, 223
Homoplasy
and parsimony in phylogenetic inference, 337, 339–42, 356
Hormonal change
and macroevolution, 108
Host-parasite relations
and disease severity, 465–82
adaptation to humans, 470–78
conclusions, 482
correlates of disease severity, 466–78
and evolutionary ecology, 480–81
and health sciences, 481
implications, 478–81
introduction, 465
vector-transmitted diseases, 469–70
winged parasites, vectors & biological control, 480
Humans
as disease hosts
and parasite adaptation, 470–78
Hummingbirds
as pollinators
and species distribution studies, 206–7
Hybrid dysgenesis
and chromosomal evolution in rodents, 143–44
Hydrocarbons
insect
ecology and systematics of, 303
Hymenoptera
competition in
and game theory, 394
see also Butterflies

I

Ideal Free Distribution
and game theory in ecology, 400
Inbreeding
and group selection models, 174
and speciation in rodents, 146, 148
Inclusive fitness
and group selection, 160, 177, 179–80
Individual selection
and group selection, 170–71, 174, 178, 184
Inflorescences
and cleistogamy in grasses, 416–18, 420, 422–23
Insecticide resistance
in aphids
selection studies, 90
Insects
chemical systematics of
see Chemical systematics
in mediterranean ecosystems, 59, 64, 69
Intrademic group selection
models of, 168–70, 173–76, 178–81
Invasion
and competition
in limiting similarity theory, 373
Invertebrates
sex-biased pattern variation in, 235–39, 246–47
Island communities
in species distribution models, 193–204
Isoptera
chemical secretions of, 289–90

K

Karyotypic evolution
and macroevolutionary theory, 126–27
Karyotypic orthoselection
and speciation in rodents, 150–51
K- Selection
allometry of, 226–28
Kuru
and evolution of disease severity, 471, 479

L

Lacustrine ecosystems
historical perspective of, 255–79
applications to modern problems, 274–77
biochemical diversity, 274
community structure, 271–74
conclusions, 277–79
empirical considerations, 260–74
introduction, 255–57
lake ontogeny, 264–67
organic production and diagenesis, 269–71
siltation, 262–64
societal influence, 260–62

theoretical considerations, 257–60
Lake restoration
and paleolimnology, 276–77
Lakes
